The engineering behind the approach.

Three documented demonstration workflows supporting the approach to validation, review and reliable handoffs.

Research and proposal drafting

n8n, OpenAI API, JavaScript and Gmail API

The workflow validates briefs, coordinates research and drafting, then delivers formatted proposals for review. It connects preparation with a clear human review point.

Recurring B2B billing

n8n, database, document and email APIs

Billing-state checks, calculations, PDF generation and delivery are connected in one workflow. The documented result is a coordinated invoice-preparation and delivery process.

Support ticket triage

n8n, JavaScript, OpenAI API and Supabase

Redaction and duplicate checks precede classification. Uncertain cases are routed for human review. The exception path is visible; redaction is not a guarantee of data protection.

These notes summarize the supplied project documentation. They do not establish electrical-distributor client outcomes; live integrations were not retested when preparing this resource.
